Anatomy and Physiology Animated Video Tutorials and Quizzes

The energy expended in physical activity depends on the activity's duration, type (e.g., walking, running, or typing), and intensity. Energy output increases the longer you perform an activity, the greater your use of large muscle groups (type of activity), and the more intensely you perform the activity. 5.

Lymphedema, also known as lymphoedema and lymphatic edema, is a condition of localized fluid retention and tissue swelling caused by a compromised lymphatic system. The lymphatic system functions as a critical portion of the body's immune system and returns interstitial fluid to the bloodstream. Lymphedema is most frequently a complication of cancer treatment or parasitic infections, but it can ...

Chapter 10 - Respiratory System STRUCTURE AND FUNCTION. Morton Lippmann. The respiratory system extends from the breathing zone just outside of the nose and mouth through the conductive airways in the head and thorax to the alveoli, where respiratory gas exchange takes place between the alveoli and the capillary blood flowing around them.

Chapter 10 - Respiratory System

The cerebrospinal fluid (CSF) is produced from arterial blood by the choroid plexuses of the lateral and fourth ventricles by a combined process of diffusion, pinocytosis and active transfer. A small amount is also produced by ependymal cells. The choroid plexus consists of tufts of capillaries with thin fenestrated endothelial cells. These are covered by modified ependymal cells with bulbous ...
