I have a cursor that is used to get some preliminary information for some other processing. It is possible that the query backing the cursor may not return any rows, and in these rare cases, we want to raise a special exception (handled and logged elsewhere so processing is not completely halted) so that the user knows about what is most likely bad input.

A metalloid is a type of chemical element which has properties in between, or that are a mixture of, those of metals and nonmetals. There is neither a standard definition of a metalloid nor complete agreement on the elements appropriately classified as such. Despite the lack of specificity, the term remains in use in the literature of chemistry.. The six commonly recognised metalloids are boron ...
