

## *Electron Microscopy Of The Cardiovascular System*

**Electron Microscopy Of The Cardiovascular**

Abstract. ELECTRON MICROSCOPY OF BAPN FED TURKEY 343 SUMMARY The ultrastructure of the cardiovascular system of the normal and BAPN-fed turkey poult is described. The posterior aorta of normal birds contained smooth muscle cells in the tunica intima; smooth muscle cells bound together by elastin and collagen in the tunica media; and collagen,...

Atherosclerotic Plaque as Infected Biofilm on Electron Microscopy. by Jeffrey Dach MD. Highlights of the Matters from the Heart ICIM March 2019 Philadelphia Meeting. At the recent Integrative Medicine Meeting, Dr Thomas Levy gave a great talk on dental issues seeding infection in atherosclerotic plaque.

Electron Microscopy still plays an important role in the diagnostic process of certain diseases. The high magnification of the electron microscope enables observations not possible by light microscopy. Ultrastructural features may enable a diagnosis to be made where the light microscopy is apparently normal.

The THI Cardiovascular Pathology Lab is a GLP Compliant Laboratory for preclinical studies and has a CLIA Certificate of Compliance for Transmission Electron Microscopy (TEM) clinical services. Currently, the lab supports Histology and Electron Microscopy studies involving stents, valves, aneurysm coils, pacing leads, endovascular devices and ...

In this review, we will highlight and summarize the use of microscopy imaging systems, including light microscopy, electron microscopy, confocal scanning laser microscopy, laser scanning

cytometry, laser microdissection, and atomic force microscopy in conjunction with a variety of histochemical techniques in studies aimed at understanding mechanisms underlying cardiovascular diseases at the cell and molecular level.

**Aim** —To review and reassess the role of this department's experience with routine electron microscopy of myocardial tissues. **Methods** —A nine year series of myocardial samples that underwent electron microscopy analysis were audited. Fifty nine samples were derived from 46 male and 13 female subjects with an age range of 15–90 years (mean, 50.6).
