Empirical research in regard to the effects of specific game design elements on psychological need satisfaction is still scarce (Mekler et al., 2015, Seaborn and Fels, 2015). However, there are a number of studies that apply this concept, and that investigate the effects of game design elements empirically.

The Whitney graph isomorphism theorem, shown by Hassler Whitney, states that two connected graphs are isomorphic if and only if their line graphs are isomorphic, with a single exception: K_3 , the complete graph on three vertices, and the complete bipartite graph $K_{1,3}$, which are not isomorphic but both have K_3 as their line graph. The Whitney graph theorem can be extended to hypergraphs.

Learn more about axes. Charts typically have two axes that are used to measure and categorize data: a vertical axis (also known as value axis or y axis), and a horizontal axis (also known as category axis or x axis). 3-D column, 3-D cone, or 3-D pyramid charts have a third axis, the depth axis (also known as series axis or z axis), so that data can be plotted along the depth of a chart.

Transition speed is the observable speed at which a UI changes states. It's primarily controlled by adjusting duration (how long a transition lasts), but also by easing (acceleration over time) and the distance that elements move.. Apply the right easing type before adjusting duration, as easing adjustments may affect duration.

Human Design is a new system of self-knowledge that differs fundamentally from anything else that exists in the world today. It is not built on belief or faith but is a logical, empirical system that offers you the opportunity to experiment with its mechanics and find out for yourself if it works for you.
