

Emergence Infestation

Emergence Infestation

Is the infestation still active? This is one of the first questions usually asked. Since emergence holes are permanent it is impossible to know for certain if the infestation, buried deep inside the wood, is active if you find just holes in the floor as pictured above.

Powderpost Beetle and Woodworm Damage in Wood Floors

The boll weevil (*Anthonomus grandis*) is a beetle which feeds on cotton buds and flowers. Thought to be native to Central Mexico, it migrated into the United States from Mexico in the late 19th century and had infested all U.S. cotton-growing areas by the 1920s, devastating the industry and the people working in the American South. During the late 20th century, it became a serious pest in South ...

Carpenter Ants: Carpenter Ant Control with Baits, Spray, Dust

Transboundary plant pests and diseases affect food crops, causing significant losses to farmers and threatening food security.. The spread of transboundary plant pests and diseases has increased dramatically in recent years. Globalization, trade and climate change, as well as reduced resilience in production systems due to decades of agricultural intensification, have all played a part.
