Internet And World Wide Web

The World Wide Web, or simply web, is a way of accessing information over the medium of the internet. It is an information-sharing model that is built on top of the internet. The web uses the HTTP protocol, only one of the languages spoken over the internet, to transmit data.

The Difference Between the Internet and World Wide Web

The World Wide Web, on the other hand, is the system we use to access the Internet. The Web isn't the only system out there, but it's the most popular and widely used. (Examples of ways to access the Internet without using HTTP include e-mail and instant messaging .)

Internet vs. World Wide Web - Computer | HowStuffWorks

The web, which is short for World Wide Web, is one of the ways information is shared on the internet (others include email, File Transfer Protocol (FTP), and instant messaging services). The web is composed of billions of connected digital documents that can be viewed using a web browser, such as Chrome, Safari, Microsoft Edge (formerly known as Internet Explorer), Firefox, and others.

Internet vs. Web: What's the Difference? - Lifewire

The terms Internet and World Wide Web are often used without much distinction. However, the two terms do not mean the same thing. The Internet is a global system of interconnected computer networks. In contrast, the World Wide Web is a global collection of documents and other resources, linked by hyperlinks and URIs.

World Wide Web - Wikipedia

The World Wide Web (WWW) is one set of software services running on the Internet. The Internet itself is a global, interconnected network of computing devices. This network supports a wide variety of interactions and communications between its devices. The World Wide Web is a subset of these interactions and supports websites and URIs.
