The levator ani is a broad, thin muscle, situated on either side of the pelvis. It is formed from three muscle components: the pubococcygeus, the iliococcygeus, and the puborectalis. It is attached to the inner surface of each side of the lesser pelvis, and these unite to form the greater part of the pelvic floor. The coccygeus muscle completes the pelvic floor which is also called the pelvic ...

3600+ Review Questions for Anatomy & Physiology Volume 1

The Emory Pre-College Program offers a diverse selection of two-week non-credit courses in a variety of disciplines. Students will experience college-level academics in a small class setting with some of Emory's leading experts in their respective fields and will receive written feedback on their work at the end of the course.

Two-Week Noncredit Courses

Boutonnière deformity (BD) can manifest itself acutely after trauma, but most BDs are found weeks following the injury or as the result of progressive arthritis. The proximal interphalangeal (PIP) joint of the finger is flexed, and the distal interphalangeal (DIP) joint is hyperextended (see the image below).
