Creatures*

Nature S Living Lights Fireflies

Synchronous fireflies produce light in their lanterns, the pale area of the abdomen visible on the underside of the insect above. The production of light by living organisms is called bioluminescence.

Synchronous Fireflies - Great Smoky Mountains National ...

I've been collecting wine bottles for the past 3 years with plans to turn them into a wine bottle lamp. I'm by no means a crafty person, but the fact that 3 empty bottles survived a move AND my massive KonMari clean out shows my dedication to this project; I wanted to make something, dang it.. After deciding it was time for the bottles to stop collecting dust, I went to googling how to ...

How to Make Fireflies in a Bottle - The Wannabe Homesteader

The main source of light on Earth is the Sun. Sunlight provides the energy that green plants use to create sugars mostly in the form of starches, which release energy into the living things that digest them. This process of photosynthesis provides virtually all the energy used by living things. Historically, another important source of light for humans has been fire, from ancient campfires to ...

Lighting or illumination is the deliberate use of light to achieve a practical or aesthetic effect. Lighting includes the use of both artificial light sources like lamps and light fixtures, as well as natural illumination by capturing daylight. Daylighting (using windows, skylights, or light shelves) is sometimes used as the main source of light during daytime in buildings.

Bioluminescence—the light of living things. by Martin Tampier. Many creatures make their own light from a chemical process. Called bioluminescence, it occurs in a variety of organisms: insects, centipedes and millipedes, a snail, earthworms, echinoderms, fungi, fish, squid, as well as some microbes.. The mechanism . Bioluminescence requires a light-emitting pigment, known as a luciferin; the ...
