### **Newnes Radio And Rf Engineer**

A superheterodyne receiver, often shortened to superhet, is a type of radio receiver that uses frequency mixing to convert a received signal to a fixed intermediate frequency (IF) which can be more conveniently processed than the original carrier frequency. It was invented by US engineer Edwin Armstrong in 1918 during World War I. Virtually all modern radio receivers use the superheterodyne ...

G Klein & H Hagenbeuk, Electronic Engineering, 39(477), pp700-704, Nov 1967: This is a kind of 'hybrid' of other methods. Here a differential pair is fed with antiphase triangle waves, and the emitter circuit contains a resistor-diode network whose conductance alters with the amplitude of the input triangle wave; the shaped sine wave then appears as the differential signal at the collectors.
