Accurate acute pain assessment requires consideration of the plasticity and complexity of children's pain perception, the influence of psychologic and developmental factors, and the appreciation of the potential severity and specific types of pain experienced. 5 Because pain is a subjective experience, individual self-report is often favored ...

The Assessment and Management of Acute Pain in Infants ...

Pain perception in children is complex, and is often difficult to assess. In addition, pain management in children is not always optimized in various healthcare settings, including emergency departments. A review of pain assessment scales that can be used in children across all ages, and a ...

Pain in Children: Assessment and Nonpharmacological Management

Children may present unique challenges to pain assessment. Recommended pain severity

assessment methods can be found in Table 1. For children aged 0 to 3 years, behavioral scales should be used; the FLACC is a well-validated easy-to-use scale. For nonverbal cognitively impaired children, the revised FLACC is useful.

Assessment of Acute Pain in Children - ScienceDirect

The problematic nature of defining pain in children makes the assessment of pain in this age group even more enigmatic. Some older children may have difficulty describing their pain because of inexperience and a limited vocabulary. The developmental psychology issues in the pediatric population also serve to confound pain assessment.

Managing Pediatric Pain - Practical Pain Management

Abstract: Numerous acute pediatric pain assessment measures exist; however, pain assessment is not consistently performed in hospitalized children. The objective of this study was to determine the nature and frequency of acute pain assessment in Canadian pediatric hospitals and factors influencing it.

Pain Assessment and Intensity in Hospitalized Children in ...

Conclusions and Future Directions. To date, there are a number of well-established assessment tools that can be used to evaluate pain in children of varying ages and with different types of pain in a variety of situations. However, the best measure will depend on the purpose of its use, the questions being asked,...

Evidence-based Assessment of Pediatric Pain

Professional Education. Pain assessment and management should be part of the educational curriculum of all health professionals who care for children. Topics should include the complexity of chronic pain, pain management in the developmentally delayed, and pain care at the end of life.
