Acceleration is the rate of change of velocity and as velocity doesn't remain constant there is acceleration present in the motion. In a circular motion, if the magnitude of the velocity remains constant then the acceleration is given by $\frac{v^2}{r}$ and is directed towards the centre of the circular path.

When the body moves with constant speed then the ...

Everything in the universe is in motion, vibrating at its perfect resonant frequency, producing sound and light waves. This includes the stars above you, the blades of grass below you, the buildings that surround you, and you.
