Genetically modified crops (GM crops or biotech crops) are plants used in agriculture, the DNA of which has been modified using genetic engineering methods. In most cases, the aim is to introduce a new trait to the plant which does not occur naturally in the species. Examples in food crops include resistance to certain pests, diseases, environmental conditions, reduction of spoilage ...

Monsanto has applied to import its GM oilseed rape GT73 into Europe for use in animal feed and processing. The Scientific Panel on GMOs of the European Food Safety Authority has given it a favourable opinion, and there will soon be a vote on it at the Council of Ministers. Here's a description of what it is and why it should be rejected

### **No to GM Oilseed Rape GT73 - Science in Society**

Genetically engineered (GE) crops producing insecticidal proteins from *Bacillus thuringiensis* (Bt) (mainly Cry proteins) have become a major control tactic for a number of key lepidopteran and coleopteran pests, mainly in maize, cotton, and soybean. As with any management tactic, there is concern that using GE crops might cause adverse effects on valued non-target species, including

arthropod ...
